## We claim:

- 1. A method for viscosity control in an alkyl diphenyl oxide sulfonic acid, comprising the step of:
- admixing a fatty acid having a carboxylic chain length between 1 and 12 into the alkyl diphenyl oxide sulfonic acid blend to provide between about 5 weight percentage and about 50 weight percentage of fatty acid in the admixture.
  - 2. A method for preparation of an alkyl diphenyl oxide sulfonic acid blend comprising the steps of:

admixing a fatty acid selected from the group consisting of formic acid, acetic acid, propionic acid, butanoic acid, pentanoic acid, valeric acid, hexanoic acid, heptanoic acid, octanoic acid, nonanoic acid, decanoic acid, undecanoic acid, and dodecanoic acid to provide between about 5 weight percentage and about 50 weight percentage of fatty acid in the admixture with an alkyl diphenyl oxide comprising

where R is an alkyl radical having between 6 and 16 carbon atoms; and sulfonating said admixture with a sulfonating agent.

3. The method of Claim 2 wherein a plurality of said fatty acids are admixed in said admixing step with said alkyl diphenyl oxide blend.

CLA CLA COLL TO BLAN THE CONTROL OF THE CONTROL OF THE CANADA

admixing a fatty acid selected from the group consisting of formic acid, acetic acid, propionic acid, butanoic acid, pentanoic acid, valeric acid, hexanoic acid, heptanoic acid, octanoic acid, nonanoic acid, decanoic acid, undecanoic acid, and dodecanoic acid to provide between about 5 weight percentage and about 50 weight percentage of fatty acid in an admixture with an alkyl diphenyl oxide sulfonic acid blend comprising

## 15. A method for preparation of a surfactant comprising the steps of:

admixing a fatty acid selected from the group consisting of formic acid, acetic acid, propionic acid, butanoic acid, pentanoic acid, valeric acid, hexanoic acid, heptanoic acid, octanoic acid, nonanoic acid, decanoic acid, undecanoic acid, and dodecanoic acid to provide between about 5 weight percentage and about 50 weight percentage of fatty acid in an admixture with an alkyl diphenyl oxide comprising

$$R \longrightarrow O \longrightarrow R$$

where R is an alkyl radical having between 6 and 16 carbon atoms; sulfonating said admixture with a sulfonating agent;

blending the sulfonated admixture into water; and neutralizing the blend of water and sulfonated admixture.

## 16. A method for preparation of a surfactant comprising the steps of:

admixing a fatty acid selected from the group consisting of formic acid, acetic acid, propionic acid, butanoic acid, pentanoic acid, valeric acid, hexanoic acid, heptanoic acid, octanoic acid, nonanoic acid, decanoic acid, undecanoic acid, and dodecanoic acid to provide between about 5 weight percentage and about 50 weight percentage of fatty acid in an admixture with an alkyl diphenyl oxide sulfonic acid blend comprising

between about 5 to about 25 weight percent

$$SO_3H$$

$$R$$
 $SO_3H$ 
 $SO_3H$
